Is your child in a classroom where the behaviours of other children interfere with their learning? Teachers often report that they cannot seem to get ahead in the classroom; they are too busy trying to supervise children rather than focusing on the lessons planned for the day. Dynamic Classroom Management (DCM) is a program designed to help teachers and children maintain a positive learning environment within the classroom. Dr. Edmunds will describe the program, discuss the principles that drive the success of DCM, and share the results reported by schools.
